

Prairie Farms Dairy Uses Temp-A-Start because...

"It increases engine, battery and starter life and keeps trucks "ready-to-go" at all times, regardless of weather conditions. Temp-A-Start is a patented, proven effective, automatic start/stop system for diesel trucks."

Here's what else John Naples had to say:

"Customers stock up on our products in the winter for fear of being snowed in. They depend on our deliveries. In severe weather, I used to have to start our trucks at all hours of the night to make sure they would be ready for the morning schedules, or I had to let them run 24 hours a day. This is no longer necessary. And besides saving fuel and reducing engine wear-and-tear on the engine, we benefit from the fact that our trucks leave the yard earlier because drivers don't have to take the time to clean snow and ice from windows. Prairie Farms Dairy has specified Temp-A-Start for two new tractors and we will continue to include this system in our specifications."
